The boat has two tubular floats (2,3) which are rigidly attached to a cabin. The cabin is sealed, transparent and in the form of a bubble, and its height is greater than the depth to which the boat is submerged.

The boat is propelled on the surface by pedals (28,29) which act through chains and a gear box. When the boat is semi-submerged, the propeller is driven by a motor which is brought into engagement by a lever (41) actuated by one of the crew.

USE - For leisure purposes such as under-water observation of marine flora and fauna. (12pp)Dwg.No.1-5)
